EDUCATION

University of Wollongong

Expected graduation: 2027

- Bachelor of Computer Science

Management Development Institute of Singapore

Graduated 2022

- Higher diploma in Ethical Hacking and Forensic Investigations Countermeasures
 - Distinction in network technology, Ethical Hacking and Countermeasures, Computer Hacking Forensic Investigations

Management Development Institute of Singapore

Graduated 2021

- Foundation diploma in information technology
 - Distinction in Mathematics, programming principles and development as well as effective communication and presentation skills.

Relevant coursework:

Certified Project Manager(CPM) - IIB Council

PROFESSIONAL EXPERIENCE

Perennial Holdings

2024 - 2025

- *Intern, Healthcare IT*
 - Key assist in preparation for the CSA Cyber Mark audit
 - Ensuring application quality and conducting stress testing during the User Acceptance Testing (UAT) phase of app development
 - Wrote Python code to translate Excel and Powerpoint files from Chinese to English
 - Prepared Templates in preparation of a network infrastructure tender
 - Sat in on discussions with external contractors (System Integrators, UI/UX Design firms, suppliers)

Republic of Singapore Air Force

2022 - 2024

- *Admin Support Assistant, Flying Training Institute*
 - Management of over 30 Air Grading Course trainees at one time, ensuring the timely clearance of medical, logistical and administrative requirements before their departure to the Air Grading Course in Jandakot, Perth
 - Troubleshooting computer systems, ensuring all unit computers are up to date with the latest firmware and security installed
 - Microsoft Powerapps development to create apps to streamline unit workflows
 - Unit finance POC - ensuring unit expenditure is within budget, ensuring the unit requirements have been purchased, as well as liaising with external contractors to ensure timely maintenance of our anti-G suits.
 - Secretary for a monthly Staff and Safety meeting where I would brief the unit POCs on Finance, training statistics, command safety directives etc.
 - Awards: Best Airman of the Month, April 2024

Various food and beverage establishments

2020 - 2022

- *Waiter, Floor Staff, Bartender*
 - Management of a bar, keeping it organised to ensure quick service as orders come in
 - Customer service, ensuring that customers sitting by the bar are attended to
 - Assisted guests with menu recommendations
 - Helped other employees to ensure proper coverage and prompt guest service
 - Communicate relevant information to guests
 - Memorise menu in order to be able to take orders and provide menu recommendations

SKILLS

- **Computer:** Trained in Java, C++ and python programming languages, with experience in linux shell.
Proficient in VMware, Database systems (SQL), basic knowledge in HTML.
 - Through the Air Force, I have attended workshops to learn Outsystems, Microsoft Powerapps, and Microsoft excel.
 - Through MDIS, I have attended workshops in effective time management, effective presentation skills, creative and critical thinking at school, as well as values for success.
- **Certifications:** ISC2 Certified in Cybersecurity (CC)

COMPUTER SCIENCE PROJECTS

- [JP Morgan Cyber Security job simulation](#)
Through this [job simulation](#), I utilised pandasDB to analyse a large dataset of fraud in financial payment services. After that, I was tasked with creating an [email classifier](#) using Python. I was able to create and train a machine learning model which was able to classify whether emails were spam or ham to an accuracy of 97%. I also sorted the dataset to find the top 10 words associated with spam, and also to find the top 10 words associated with valid emails. For the [final task](#), I designed a system to tighten access to sensitive information. This was achieved by setting a maximum amount of access rights a user can have, thus removing old access rights when the user gains new ones, and storing all access roles into a Python dictionary. My coursework for this job simulation can be found on my [Github](#) page.
- [JP Morgan Quantitative Research job simulation](#)
Through this [job simulation](#), I first wrote a [python script](#) that was able to analyse a dataset to take a date as an input and return an estimation of the future price of the commodity on that date. I achieved this by using a machine learning SARIMA model. In the second task, I created a [prototype pricing model](#). This model was able to take multiple inputs and output the value of a contract. This model was able to accommodate many variables including multiple injection dates, multiple withdrawal dates, the injection rate (amount of asset purchased), withdrawal rate and a user inputted storage cost. For the third task, I built a [model](#) using python that was able to estimate the probability of default for a borrower based on a dataset provided. This taught me how to choose appropriate independent variables from a dataset, and allowed me to practise using python as a data analysis tool. For the final task of the job simulation, I deployed [python code](#) to bucket customers with various FICO scores in order to group them in a way that would allow for a viable estimation on the probability of default on loans issued to customers. This taught me how to apply statistical formulas to business solutions.
- [ANZ Cyber security management job simulation](#)
Through this [job simulation](#), I practised and showcased my ability to use wireshark, thus creating a [network capture analysis](#) where I could demonstrate my ability to analyse network logs, while also showing the processes that I use to retrieve information from the network logs. I was also tasked with investigating emails to determine the likelihood of the emails being of malicious nature. My coursework for this job simulation can be found on my [Github](#) page
- [Verizon Cloud Platform Job Simulation](#)
I completed a job simulation involving building a hypothetical new VPN product for Verizon's Cloud Computing team. I Used command line Python to test whether Verizon's VPN met the cloud-native traits, i.e. redundancy, resiliency and least-privilege.
I Researched approaches to achieve application security and communicated insights in a PowerPoint Presentation.
